What is WWViews on Global Warming?

WWViews is a global citizen consultation on climate change in 38 countries.

The purpose is to enable citizens all over the world to define and communicate their positions on climate change - citizens have to live with future climate policy and should therefore be consulted before political decision-makers negotiate at the COP15.

The goal is to reach these decision-makers at the United Nations Conference on Climate Change (COP15) in Copenhagen, December 2009.

Who is behind it?

WWViews is organised in co-operation with partner organisations in 38 countries, developed as well as developing, in all five continents. You can see a full list of national partners here.

What is the outcome?

Results from the national citizen consultations are gathered live on the Internet and will be handed directly to decision-makers at COP15.

What can you do?

Follow us on World Climate Community, Facebook, or on our website to check for updates, information on future events, and how to engage in debates on climate change.
